SVD, U and V are unitary matrices, Σ is a diagonal matrix with non-negative entries, and $\mathbf{1}$ is a vector of ones. The SVD decomposition is used to compute the singular values of the matrix A , which are the eigenvalues of the matrix $A^T A$. The singular values are sorted in descending order, and the top k singular values are used to compute the singular value decomposition of the matrix A . The singular value decomposition is used to compute the singular values of the matrix A , which are the eigenvalues of the matrix $A^T A$. The singular values are sorted in descending order, and the top k singular values are used to compute the singular value decomposition of the matrix A .
