NOTES

Thoroughly cultivate all areas to be planted to a minimum depth of at least 300mm. Include during the cultivation mulching compost at a rate of 15litres per m2.

Heavy and Extra Heavy Standard Trees to be planted into tree pits of 1200mm diameter 900mm and depth, each secured using a Platypus PF1 sub-surface root guying system and accessories. Backfill to be imported topsoil to BS3882, incorporating 80 litres of peat free compost thoroughly mixed into the backfill.

All shrubs to be planted in groups of 3, 5, 7 or 9 of the same species, each species evenly distributed throughout the planting bed. Each plant is to be planted in pits of 300mm diameter and depth, backfilled with imported topsoil to BS3882, incorporating 5 litres of peat free compost into each pit.

All areas to be grass seeded to a depth of at least 150mm, all debris and stones to be removed to contractors tip off site. The cultivation of these areas to be undertaken by machine, following the completion of any regrading works. Immediately prior to grass seeding carry out a final cultivation, and apply pre-seed fertiliser according to manufacturers recommendations.

Following the completion of planting, apply a 50mm layer of well rotted bark chippings.
