Re: The installation of a 3.25m vent stack servicing the existing underground natural gas pressure reduction installation with all ancillary services and associated site works at Kiltalown Way, Tallaght, Dublin 24 by Gas Networks Ireland.

Dear Sir/Madam,

Please find enclosed a Planning Application to install a 3.25m vent stack servicing the existing underground natural gas pressure reduction installation with all ancillary services and associated site works at Kiltalown Way, Tallaght, Dublin 24.

Fingleton White have been appointed by Gas Networks Ireland as design engineers for the upgrades of a number of natural gas pressure reduction installations nationwide. We will be responsible for managing the planning application process on behalf of Gas Networks Ireland. All liaising with the local authority will be through Fingleton White.

The pressure reduction unit downgrades the pressure before it enters buildings of nearby gas customers. The unit will be upgraded to include a safety device i.e. vent stack to mitigate the risk of accumulation of gas within the enclosure. The vent stack serves to vent any gas released from the unit to a safe height.

We trust the enclosed documents provide adequate information for you to consider our application, but we shall willingly supply any supplementary information you may require.

If you may have any queries please do not hesitate to contact me.

Yours Sincerely,

A handwritten signature in black ink that reads 'Brian O'Boyle'.

Brian O'Boyle
