

Important Note:
 The new prefabricated building will be of lightweight construction supported off a grid of concrete block or cast in situ pads. These pads and their foundation will be carefully positioned to avoid any contact whatever with the existing main sewer and surface water drain running parallel with the rear line of the main building. To ensure that this objective is achieved and prior to any works beginning on site, the area will be excavated and the precise line of both pipelines will be clearly established.

Project: **Ballyroan Boys School**
