**Landscape Strategy:**

The landscape strategy for Brownsbarn Site:

1. Regarding RFI item 3, along the western boundary, the 10m buffer zone has been increased to provide a buffer of between 15.1m and 25m. No tree removal required from the development. More planting has been added along the western boundary to supplement existing planting and enhance the biodiversity.
2. Regarding RFI item 5, a green roof has been added following the relevant recommendations. (See Landscape Masterplan, Drawing No. ENO-JBAI-XX-XX-DR-L-0002). The Masterplan and Planting Plan show increased planting along the southern boundary of site, the planting will be decreasing toward the protected structure. The Landscape Masterplan also shows permeable paving (grass-crete) throughout the site, with tree planting between the car parking space.
3. A tree pit detail has been added into the carpark design which adjacent to hard standing surfaces, this will allow incorporated SuDS.
4. Tree planting along the N7 has been kept close to the proposed buildings to allow for maximum retention of views from the N7 towards the *Specialized Ireland* while enhancing screening of the proposed building and provision of habitat.
