Warren,

Following our correspondences mid last year, we have been contacting the ATC tower daily when using cranes on site and this has gone very smoothly.

On a further issue, our client has received planning permission to install PV solar panels on the roof of this unit. Part of the planning submission was a Glint and Glare report. One of the conditions of the grant was written agreement from the IAA and Air Corp that they will not affect aircraft – I have highlighted the exact wording in the attached.

Could you please direct me as to who would be able to assess and confirm this within the Air Corp.

I have contacted the IAA separately. Please see attached documents.

Appreciate any help you can give on this matter

Brian
