To whom it may concern,

During a standard monitoring test of noise levels of the portable pay-to-use compactors manufactured by ECS Ltd., the decibel average is 51dB at 1 meter while operating. This level is comparable to a household washing machine or dishwasher which generally range between 55dB-70dB

The test was carried out at an existing site in Co. Wexford and is standardised for all units manufactured by ECS Ltd.

If you have any further questions, please do not hesitate to contact me at the details above.

Many thanks,

Dick Devereux
