Summary of report

Results

Most bat activity was of Leisler's bats, with 75 Leisler's bat passes recorded across the middle of the site, in the area where treelines will be removed, and across the playing field. Common and soprano pipistrelles were also found on site. There are no signs of bats entering, leaving, or swarming at buildings or trees, and no derogation licence is required.

There will be a loss in both horizontal feeding areas (through building) and vertical feeding areas, with 109 trees planned for removal. In addition to providing shelter, the tall poplar trees screen the considerable light pollution from the R134 road. These trees are due for removal. None of the trees have high bat roosting potential. Replanting of trees and hedgerows must take place to mitigate the loss of the trees, and to shield light pollution.

Bat species found feeding and commuting on the site.

Common pipistrelle -Pipistrellus pipistrellus

Leisler's bat – Nyctalus Leisleri

Soprano pipistrelle – Pipistrellus pygmaeus

Recommendations and mitigation

(1) 4 2F Schwegler bat boxes must be placed on site. These must be placed on trees, buildings, or poles, at least 3 meters high, with a clear drop below them – as bats must drop to fly. They must be placed in a dark area. They can be purchased from - <https://www.veldshop.nl/en/bat-box-2f.html>

(2) If bats are discovered at any stage of the building work, building work must cease and myself and the wildlife ranger must be contacted.

(3) Trees and hedgerows must be retained or replanted. The 109 trees for removal must be replanted with native species, or alternatively a small pond 5 meters x 10 meters must be installed, to compensate for the loss in feeding for bats. In addition, semi- mature trees must be planted to the north of the site to screen light pollution from the road.

Planting throughout the school with native species will enhance the area for bats. Plant species from the All-Ireland Pollinator Plan must be included. All-Ireland Pollinator Plan species list - <http://www.biodiversityireland.ie/wordpress/wp-content/uploads/Pollinator-friendlyplanting-code-temporary-draft.pdf> Consideration should be given to providing a range of vegetation heights, by the use of ivy and climbers on walls.

The grassy areas must not be cut when the school is not in use (e.g., the summertime) Following a no mow regime from May until August will allow the insects to develop over the summertime)

(1) There is considerable light pollution on the site. Lighting must be switched off when the building is not in use, with sensor timers used on security lighting.

Rows of 5-6 conifers must be planted behind floodlights, to prevent light spillage.

Bats are sensitive to lighting. A dark sky area must be designated within the development.

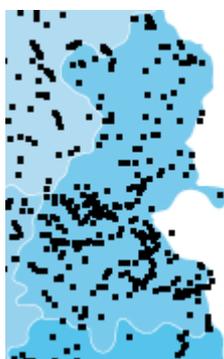

Other lighting must be in accordance with

[Bats and Lighting](#) – Guidance Notes for Planners, Engineers, Architects, and Developers (Bat Conservation Ireland, 2010).

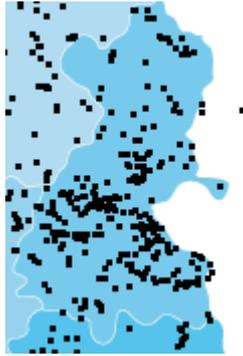

- [Bats and Lighting in the UK](#) – Bats and the Built Environment Series (Institute of Lighting Professionals, September 2018).
- [Guidance Notes](#) for the Reduction of Obtrusive Light GN01 (Institute of Lighting Professionals, 2011).

All data from this report will be logged with Bat Conservation Ireland

Habitat Classification (Fossitt 2000)

BL3 (buildings) WL2 (treelines) GAI (Grassland)

Date – Aug 15, 2023

Constraints – Survey constraints

(2) Mobility of bats – Bat species are mobile and can move from roost to roost, depending on roost availability, feeding availability and weather conditions. They may move to roosts which have not been identified in this report in order to hibernate or create mating or feeding perches. A bat survey is a snapshot of bat activity over the survey time.

(3) Identification of bats- It can be difficult to differentiate myotis species. For this reason, the sound files are included within the report. Brown long eared bats are very quiet, and their presence can be overlooked in bat surveys as they may not register on bat detectors.

Temperature and weather conditions – 9C.

Complexity of lands and ability to cover ground during surveys All areas were accessible.

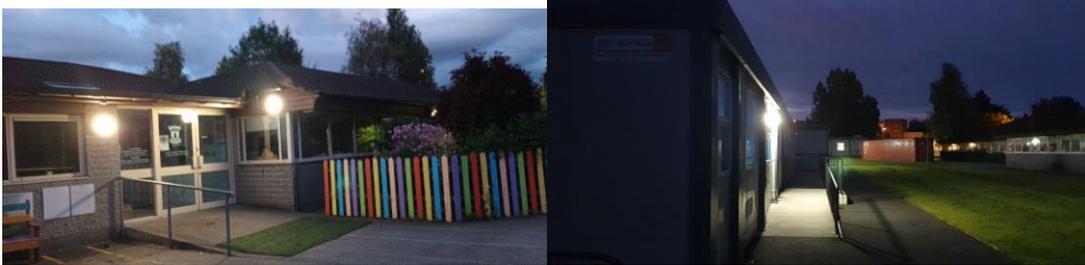

Sunrise/sunset 6.06 20.51

Description of project – See Appendix 1 and II for site plans and list of trees for felling.

Light pollution

There were high levels of light pollution on site with light levels of 249 lux at 05.23.

There was also high levels of light pollution off site, which was screened by the trees at the boundary.

Light pollution with considerable light spillage

Methodology

Bat Survey - Equipment

Exide Lamps

Petzl Tikka Head torch

Two Anabat walkabout detectors and kaleidoscope sound analysis software with GPS

Two mini song meters with sound analysis

One Echo meter touch

One Fiberscope

One Thermal imager

The song meter mini detectors were left in place overnight in the hedgerows/treelines to the north and middle of the site (treelines for removal)

Bat assessment

The bat assessment commenced at 21.00 with three surveyors.

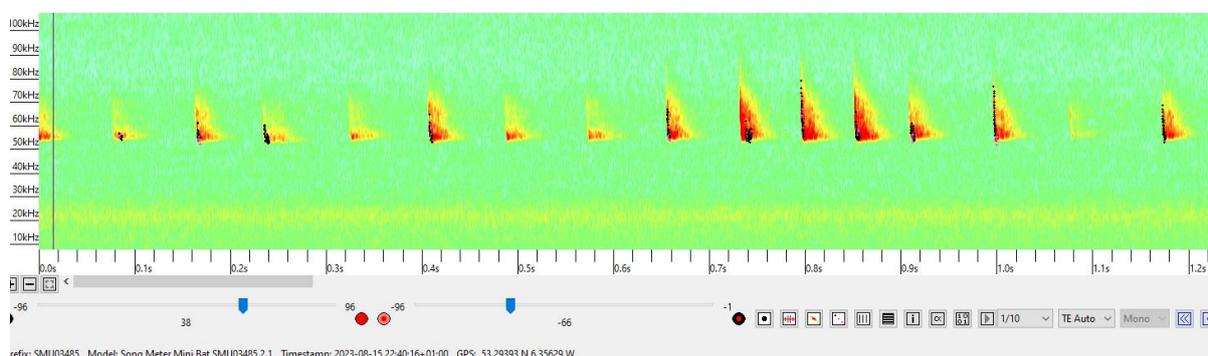

All internal and external areas and attics which could be safely accessed within the buildings, were checked for signs of bat usage – droppings, staining, etc. No signs of bats were found. Two song meter minis were placed along the trees to the north of the site to remotely record bats overnight.

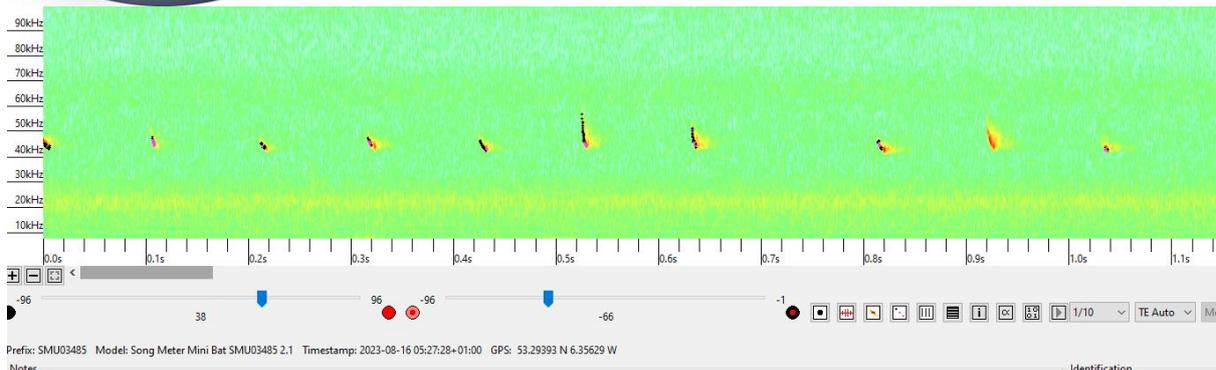

Attics checked for bats.

At 21.15 a Leisler's bat was seen flying over the school, and then moved east and fed in this area until 21.25. At 21.46 a soprano pipistrelle was seen to the southwest of the site. It fed in this area until 21.52. A common pipistrelle was recorded at 22.00 along the boundary of the Old Nangor road, then moved to the middle of the site, along the treeline. A soprano pipistrelle was seen to the north of the site at 22.17, feeding along the treeline.

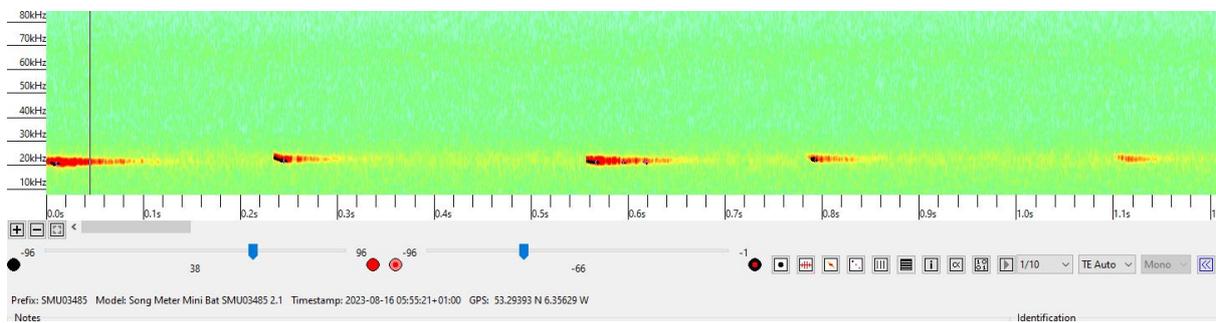

Soprano pipistrelle 22.40 along treeline to the north

At 5.27 a Leislers bay was recorded flying over the playing field, and a common pipistrelle was seen flying along the treeline to the north of the site at 5.27.

Common pipistrelle 5.27

A soprano pipistrelle was seen in this area at 5.33. The common pipistrelle fed and circled around the gate area in the hedgerow until 5.39. The Leisler's bat continued to feed over the football pitch until 5.55.

Leisler's bat 5.51

Map of main bat activity

Red triangle – Leisler’s bat

Blue triangle – Common pipistrelle

Green triangle – Soprano pipistrelle

Results

Most bat activity was of Leisler’s bats, with 75 Leisler’s bat passes recorded across the middle of the site, in the area where treelines will be removed, and across the playing field. Common and soprano pipistrelles were also found on site. There are no signs of bats entering, leaving, or swarming at buildings or trees, and no derogation licence is required.

There will be a loss in both horizontal feeding areas (through building) and vertical feeding areas, with 109 trees planned for removal. In addition to providing shelter, the tall poplar trees screen the considerable light pollution from the R134 road. These trees are due for removal. None of the trees have high bat roosting potential. Replanting of trees and hedgerows must take place to mitigate the loss of the trees, and to shield light pollution.

Bat species found feeding and commuting on the site.

Common pipistrelle -Pipistrellus pipistrellus

Leisler's bat – Nyctalus Leisleri

Soprano pipistrelle – Pipistrellus pygmaeus

Recommendations and mitigation

(1) 4 2F Schwegler bat boxes must be placed on site. These must be placed on trees, buildings, or poles, at least 3 meters high, with a clear drop below them – as bats must drop to fly. They must be placed in a dark area. They can be purchased from - <https://www.veldshop.nl/en/bat-box-2f.html>.

(2) If bats are discovered at any stage of the building work, building work must cease and myself and the wildlife ranger must be contacted.

(3) Trees and hedgerows must be retained or replanted. The 109 trees for removal must be replanted with native species, or alternatively a small pond 5 meters x 10 meters must be installed, to compensate for the loss in feeding for bats. In addition, semi- mature trees must be planted to the north of the site to screen light pollution from the road.

Planting throughout the school with native species will enhance the area for bats. Plant species from the All-Ireland Pollinator Plan must be included. All-Ireland Pollinator Plan species list - <http://www.biodiversityireland.ie/wordpress/wp-content/uploads/Pollinator-friendlyplanting-code-temporary-draft.pdf> Consideration should be given to providing a range of vegetation heights, by the use of ivy and climbers on walls.

These areas would be suitable areas for planting with species from the All-Ireland Pollinator Plan.

Walls should have climbing plants, ivy, etc.

The grassy areas must not be cut when the school is not in use (e.g., the summertime) Following a no mow regime from May until August will allow the insects to develop over the summertime)

Allow grassy areas to grow in the summer months.

- (4)** There is considerable light pollution on the site. Lighting must be switched off when the building is not in use, with sensor timers used on security lighting. Rows of 5-6 conifers must be planted behind floodlights, to prevent light spillage.

Plant a row of trees behind the lights to prevent back spill of light pollution.

Bats are sensitive to lighting. A dark sky area must be designated within the development.

Other lighting must be in accordance with

[Bats and Lighting](#) – Guidance Notes for Planners, Engineers, Architects, and Developers (Bat Conservation Ireland, 2010).

- [Bats and Lighting in the UK](#) – Bats and the Built Environment Series (Institute of Lighting Professionals, September 2018).
- [Guidance Notes](#) for the Reduction of Obtrusive Light GN01 (Institute of Lighting Professionals, 2011).

Bat Biology

Female bats gather in groups known as maternity roosts in summer to have their young. They generally have one baby each year, so are slow to reproduce, and disturbance of a maternity roost can be catastrophic.

In winter bats move to old stonework, trees, and caves to hibernate. They are especially vulnerable here as they are slow to awaken, and if tree felling is carried out, they can easily be killed.

Legislation

Bats are protected under the 1996 Wildlife Act, the 2000 Wildlife (Amendment) Act, Stat Ist 94 of 1997, Stat Ist 378 of 2005, The Habitats Directive, The Bonn and Bern Convention, and the Euro bats agreement.

The European Community (Natural Habitats) Regulations S.I. No 94 of 1997 states:

23(1) The minister shall take the requisite measures to establish a system of strict protection for the fauna consisting of the animal species set out in Part 1 of the First Schedule prohibiting –

- a) All forms of deliberate capture or killing of specimens of those species in the wild.
 1. The deterioration or destruction of breeding sites or resting places of those species.

The EU Habitats Directive

Article 12(1) of the 'Council Directive 92/43/EEC on the conservation of natural habitats and wild fauna and flora (Habitats Directive) states:

“Member States shall take the requisite measures to establish a system of strict protection for the animal species listed in Annex IV(a) and their natural range, prohibiting:

- a) all forms of deliberate capture or killing of specimens of these species in the wild.
- b) deliberate disturbance of these species, particularly during the period of breeding, rearing, hibernation, and migration.
- c) deliberate destruction or taking of eggs from the wild.
- d. deterioration or destruction of breeding sites or resting places.”

The EU Habitats Directive (92/43/EEC) lists all Irish bat species in Annex IV and one Irish species, the lesser horseshoe bat (*Rhinolophus hipposideros*), in Annex II. Annex II includes animal and plant species of community interest whose conservation requires the designation of Special Areas of Conservation (SACs) because they are endangered, rare, vulnerable, or endemic. Annex IV includes various species that require strict protection. Article 11 of the Habitats Directive requires member states to monitor all species listed in the Habitats Directive and Article 17 requires States to report to the EU on the findings of monitoring schemes.

The Bern and Bonn Conventions

Ireland is also a signatory to a number of conservation agreements pertaining to bats such as the Bern and Bonn Conventions. The European Bats Agreement (EUROBATS) is an agreement under the Bonn Convention. Ireland and the UK are two of the 31 signatories. The Agreement has an Action Plan with priorities for

implementation. Devising strategies for monitoring of populations of selected bat species in Europe is among the resolutions of EUROBATS.

1.3.1 The Berne Convention

Article 6 of the "Convention on the Conservation of European Wildlife and Natural Habitats" (Berne Convention) reads:

"Each Contracting Party shall take appropriate and necessary legislative and administrative measures to ensure the special protection of the wild fauna species specified in Appendix II. The following will in particular be prohibited for these species:

- a) all forms of deliberate capture and keeping and deliberate killing.
- b) the deliberate damage to or destruction of breeding or resting sites.
- c) the deliberate disturbance of wild fauna, particularly during the period of breeding, rearing and hibernation, insofar as disturbance would be significant in relation to the objectives of this Convention; ...

Appendix II lists strictly protected fauna species and this list includes "Microchiroptera, all species except *Pipistrellus pipistrelles*".

The EUROBATS Agreement

The 'Agreement on the Conservation of Populations of European Bats' (EUROBATS) was negotiated under the 'Convention for the Conservation of Migratory Wild Species' (Bonn Convention) and came into force in January 1994. The legal protection of bats and their habitats are given in Article III as fundamental obligations:

- "1. Each Party shall prohibit the deliberate capture, keeping or killing of bats except under permit from its competent authority.
2. Each Party shall identify those sites within its own area of jurisdiction which are important for the conservation status, including for the shelter and protection, of bats. It shall, taking into account as necessary economic and social considerations, protect such sites from damage or disturbance. In addition, each Party shall endeavour to identify and protect important feeding areas for bats from damage or disturbance."

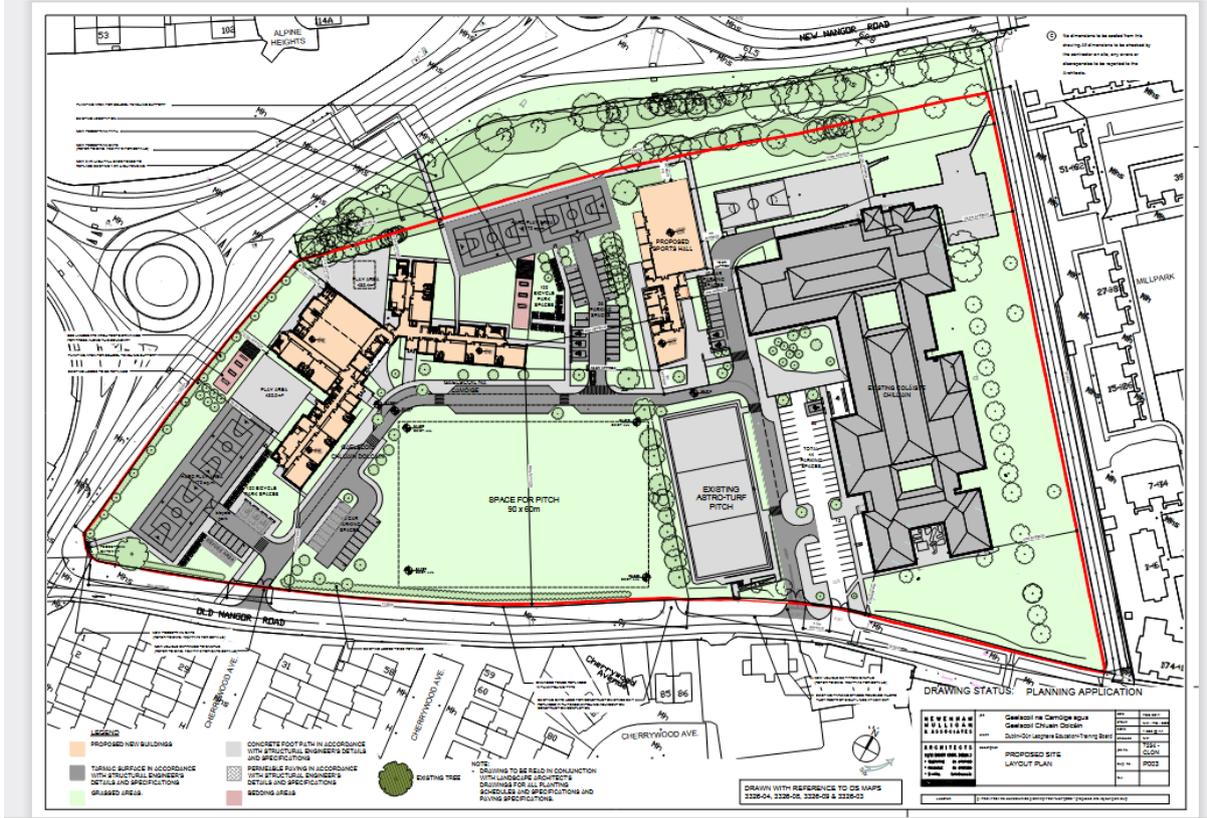

The Agreement covers all European bat species.

Bat data from within 10km of the site

BCIreland data: search results 18 Aug 2023					
Search parameters: Roosts Transects Ad-hoc observation sites with observations of all species within 10000m of O0636631532					
Roosts					
Name	Grid reference	Grid ref easting	Grid ref northing	Address	Species observed
23 Woodbrook Park	O127281	312700	228100	Templeogue, County Dublin	Nyctalus leisleri
33 Inchicore Rd	O1234	312000	234000	Inchicore Rd, Dublin 8, County Dublin	Unidentified bat
36 Oaklawn Wood	O0036	300000	236000	Leixlip, County Kildare	Nyctalus leisleri
4 Crookshare	O0125	301000	225000	Rathcoole, County Dublin	Unidentified bat
60 Cremore	O1227	312000	227000	Templeogue, Dublin 16, County Dublin	Unidentified bat
7 Stirling Park	O1530	315000	230000	Orwell Road, Rathgar, Dublin 14	Unidentified bat
71 Forest Hill	O0226	302000	226000	Rathcoole, County Dublin	Unidentified bat
Abbotstown House	O092393	309200	239300	Abbotstown Avenue, Finglas West, Dublin 11, County Dublin	Nyctalus leisleri
Airlie Stud Stable Block, Adamstown, Co. Dublin	O020336	302000	233600	Airlie Stud Stable Block, Adamstown, Co. Dublin	Unidentified bat
Anna Liffey House	O0436	304000	236000	Lucan, County Dublin	Pipistrellus spp. (45kHz/55kHz), Plecotus auritus
Avalon	O005413	300500	241300	Dunboyne, County Meath	Pipistrellus pygmaeus, Myotis mystacinus
Bailiff's/Superintendent's Lodge	O109356	310900	235600	Phoenix Park, County Dublin	Pipistrellus pygmaeus
Beech Tree Roost St Catherines Park	O014359	301400	235900	Leixlip, County Kildare	Myotis daubentonii
Blanchardstown Hospital	O0839	308000	239000	Dublin 15	Pipistrellus spp. (45kHz/55kHz), Pipistrellus pygmaeus
Castleknock College	O0868736557	308687	236557	Castleknock, County Dublin	Plecotus auritus, Pipistrellus pygmaeus, Pipistrellus pipistrellus

					(45kHz), Nyctalus leisleri, Myotis spp.
Cheeverstown house	O125285	312500	228500	Templeogue, Dublin 6W	Pipistrellus pygmaeus
Church at St. Mary's Hospital	O106347	310600	234700	Phoenix Park, Dublin 20, County Dublin	Plecotus auritus
Church of the Nativity of the Blessed Mary	O0390026700	303900	226700	Garters Lane, Saggart, Co. Dublin	Plecotus auritus
